ABSTRACT

A method and system for customizing a computerized system having a plurality of operating features, including selecting at least one independent parameter from a predefined list of parameters for selecting at least one of the operating features of the customized computerized system, and storing the independent parameter in a The at least one of the selected parameter set. operating features is enabled by selecting at least one secondary parameter from a predefined list of secondary parameters wherein the secondary parameters, associated with the at least one independent parameter, and at least one secondary parameter is stored in the At least one dependent parameter is parameter set. configuring the computerized system, determined for wherein the dependent parameter is generated from a predefined list of dependent parameters in accordance with the parameter set, and the dependent parameter is added to the parameter set. A compilation of parameters is installed in the customized computerized system, where the compilation of parameters is generated from the parameter set, wherein the compilation of parameters enables the selected operating features of the customized computerized system.
